

KINGA AutoVerify AI — Claims Manager Portal Audit v1.0

Document Type: Portal Audit Report
Portal: Claims Manager
Audit Framework: KINGA Portal Audit Master Prompt v1.1 (10-Phase, 13 Deliverables)
Date: June 2026
Status: Production Readiness Assessment

Executive Summary

The Claims Manager Portal is the operational hub for the head of claims, responsible for overseeing the entire claims lifecycle from intake through to financial closure. The portal is substantially built and functional, with a well-structured six-tab dashboard, real-time queue management, AI-assisted decision support, and a growing suite of management reports.

Critical Finding: The `sendBackClaim` workflow action — one of the most operationally important controls a claims manager possesses — calls the wrong backend procedure (`trpc.claims.approveClaim` as a placeholder). When a claims manager sends a claim back to a processor or risk manager, the system silently executes an approval action instead. This is a production-blocking defect that must be resolved before go-live.

Top 5 Recommendations:

- [Critical]** Replace the `sendBackClaim` placeholder with a dedicated `sendBackClaim` procedure that uses the `WorkflowEngine` to transition the claim to `internal_review` or `technical_approval` as appropriate.
- [High]** Add per-claim report buttons for `claim.cost_comparison`, `claim.repair_decision`, and `claim.audit_trail` to the Review Queue tab — these are authorised for `claims_manager` but are not surfaced in the UI.
- [High]** Surface the Claims Ageing panel (already built for the Executive Dashboard) within the Claims Manager Dashboard to give the manager real-time dwell-time visibility.
- [High]** Implement a dedicated `sendBackClaim` procedure that records the target role (processor vs. risk manager) and the reason in the audit trail.
- [Medium]** Add a `closeForProcessing` procedure that is distinct from `approveClaim` — the current dual-use of `approveClaim` for both approval and closure creates ambiguous audit records.

Production Readiness Verdict: Conditional — Not Ready for Go-Live. The portal is operationally viable for supervised use but must not be deployed to a live insurer until the `sendBackClaim` bug is resolved.

Deliverable 1 — Navigation Map

Portal Identity

Field	Value
Portal Name	Claims Manager Portal
Primary Role	<code>claims_manager</code>
Route Prefix	<code>/insurer-portal/claims-manager</code>
Entry Component	<code>ClaimsManagerDashboard.tsx</code>
Lines of Code	~1,250 (<code>ClaimsManagerDashboard.tsx</code>)
Layout	<code>InsurerPortalLayout</code> with role-scoped sidebar

Sidebar Navigation (5 Items)

Label	Description	Route	Status
My Dashboard	Queue, stats & finances	/insurer-portal/claims-manager	Working
Intake Queue	New claims awaiting assignment	/insurer-portal/claims-manager?tab=intake	Working
Active Claims	Claims in progress	/insurer-portal/claims-manager?tab=active	Working
Review Queue	Ready for final review	/insurer-portal/claims-manager?tab=review	Working
Processed Claims	Closed and settled history	/insurer-portal/claims-manager?tab=processed	Working

Note: The Fleet Approvals tab is accessible within the dashboard but is not listed in the sidebar navigation. It is only reachable by navigating to the dashboard and selecting the tab.

Dashboard Tab Structure (6 Tabs)

Tab	Value	Primary Purpose	Data Source
Intake Queue	intake	New claims awaiting processor assignment	trpc.claims.getIntakeQueue
Review Queue	review	Claims ready for manager final review	trpc.workflowQueries.getClaimsByStatus
Active Claims	active	All in-progress claims portfolio view	trpc.claims.getActiveClaims
Fraud Alerts	fraud	High-risk flagged claims	trpc.claims.getFraudAlerts
Processed Claims	processed	Closed and settled claims history	trpc.workflowQueries.getClaimsByStatus
Fleet Approvals	fleet	Fleet manager account requests	trpc.fleetAccounts.*

Claim Detail View

InsurerClaimDetails.tsx is a redirect-only component. It immediately redirects to /insurer/claims/:id/comparison?report=standard , which renders ClaimsManagerComparisonView.tsx . The comparison view is the actual claim detail page.

Comparison View Panels (Role-Conditional)

Panel	Shown To	Component
QMS Compliance Panel	claims_manager , risk_manager	QMSCompliancePanel
Vehicle Structural Intelligence	claims_manager , risk_manager	VehicleStructuralIntelligencePanel
Technical Validation Panel (Risk flags)	risk_manager only	Inline in ClaimsManagerComparisonView
Three-Column Comparison	All roles	KINGA Assessment / Assessor Report / Panel Beater Quotes

Deliverable 2 — Orphaned Feature Register

Feature	Location	Status	Issue
<code>sendBackClaim</code> action	<code>ClaimsManagerDashboard.tsx:269</code>	Broken	Calls <code>trpc.claims.approveClaim</code> — no dedicated <code>sendBackClaim</code> procedure exists
<code>closeForProcessing</code> action	<code>ClaimsManagerDashboard.tsx:252</code>	Broken	Also calls <code>trpc.claims.approveClaim</code> with <code>selectedQuoteId: 0</code> ambiguous audit record
Fleet Approvals tab	Dashboard tab 6	Orphaned from sidebar	Tab exists and works but is not linked from sidebar navigation
<code>claim.cost_comparison</code> report	<code>reportDefinitions.ts:66</code>	Authorised but not surfaced	<code>claims_manager</code> is authorised but no button exists in ClaimsManagerDashboard
<code>claim.repair_decision</code> report	<code>reportDefinitions.ts:67</code>	Authorised but not surfaced	Same — authorised but no UI entry point
<code>claim.audit_trail</code> report	<code>reportDefinitions.ts:71</code>	Authorised but not surfaced	Same — authorised but no UI entry point
<code>claim.forensic</code> report	<code>reportDefinitions.ts:69</code>	Authorised but not surfaced	<code>claims_manager</code> is authorised but no button in ClaimsManagerDashboard
<code>portfolio.dwell_time</code> report	<code>reportDefinitions.ts:76</code>	Authorised but not surfaced	No button in Claims Manager
<code>portfolio.panel_beater_performance</code> report	<code>reportDefinitions.ts:77</code>	Authorised but not surfaced	No button in Claims Manager
<code>portfolio.fraud_summary</code> report	<code>reportDefinitions.ts:80</code>	Authorised but not surfaced	No button in Claims Manager

Deliverable 3 — Data Lineage Matrix

KPI Cards (Manager Overview Header)

KPI	UI Location	tRPC Procedure	DB Table	Fallback
Total Savings Identified	Dashboard header	<code>trpc.claims.getManagerOverview</code> → <code>kpis.totalSavings.value</code>	<code>claims.approvedAmount</code> vs <code>aiAssessment.estimatedCost</code>	<code>DEMO_DASHBOARD_STATS</code>
Completed This Month	Dashboard header	<code>trpc.claims.getManagerOverview</code> → <code>kpis.completedClaims.value</code>	<code>claims</code> WHERE <code>status = 'closed'</code>	<code>DEMO_DASHBOARD_STATS</code>
Total Claims	Dashboard header	<code>trpc.claims.getManagerOverview</code> → <code>kpis.totalClaims.value</code>	<code>claims</code> COUNT	<code>DEMO_DASHBOARD_STATS</code>
Completion %	Dashboard header	Derived from above	Derived	Derived from demo

Queue Data

Queue	tRPC Procedure	DB Query	Fallback
Intake Queue	<code>trpc.claims.getIntakeQueue</code>	<code>claims</code> WHERE <code>workflowState = 'intake_queue'</code>	<code>DEMO_INTAKE_CLAIMS</code>
Review Queue	<code>trpc.workflowQueries.getClaimsByStatus</code>	<code>claims</code> WHERE <code>workflowState</code> IN ('technical_approval', 'financial_decision')	<code>DEMO_REVIEW_CLAIMS</code>
Active Claims	<code>trpc.claims.getActiveClaims</code>	<code>claims</code> WHERE <code>active</code> states	<code>DEMO_ACTIVE_CLAIMS</code>
Fraud Alerts	<code>trpc.claims.getFraudAlerts</code>	<code>claims</code> WHERE <code>fraudRiskScore</code> ≥ <code>threshold</code>	<code>DEMO_FRAUD_ALERTS</code>
Processed Claims	<code>trpc.workflowQueries.getClaimsByStatus</code>	<code>claims</code> WHERE <code>workflowState = 'closed'</code>	<code>DEMO_PROCESSED_CLAIMS</code>
Dashboard Stats	<code>trpc.claims.getDashboardStats</code>	Aggregate query	<code>DEMO_DASHBOARD_STATS</code>

Demo Data Fallback Pattern

The portal uses six `DEMO_` constants imported from `@/lib/demoData`. These are applied only when the real query returns an empty array or null result. This is a correct and intentional pattern for a platform with sparse production data. The fallback is not hardcoded — it is conditional on real data being absent.

Claim Detail Data

Data Point	trPC Procedure	DB Table
Claim record	<code>trpc.claims.getById</code>	<code>claims</code>
AI assessment	<code>trpc.aiAssessments.byClaim</code>	<code>ai_assessments</code>
Assessor evaluation	<code>trpc.assessorEvaluations.byClaim</code>	<code>assessor_evaluations</code>
Panel beater quotes	<code>trpc.quotes.byClaim</code>	<code>quotes</code>
Vehicle structural profile	<code>trpc.vehicleStructural.getClaimProfile</code>	ANCAP/CRASH3 lookup

Deliverable 4 — Workflow Intelligence Assessment

Claims Manager Workflow Position

The claims manager sits at the top of the claims processing hierarchy. Their workflow position is:

```
Intake Queue → [Processor Assignment] → Under Assessment → Internal Review
  → Technical Approval ← [Claims Manager Review Queue]
  → Financial Decision ← [Claims Manager Financial Closure]
  → Payment Authorized → Closed
```

The claims manager interacts primarily at the **Technical Approval** and **Financial Decision** stages, with oversight of the entire pipeline.

Workflow Actions Available

Action	UI Location	Backend Procedure	Status
Assign to Processor	Intake Queue tab	<code>trpc.claims.getAvailableProcessors</code> + assignment	Working
Trigger AI Assessment	Intake Queue	<code>trpc.claims.triggerAiAssessment</code>	Working
Reset Stuck Claim	Intake Queue	<code>trpc.claims.resetStuckClaim</code>	Working
Assign to Assessor	Intake Queue	<code>trpc.claims.assignToAssessor</code>	Working
Approve for Closure	Review Queue	<code>trpc.claims.approveClaim</code> (via <code>closeForProcessing</code>)	Ambiguous
Send Back to Processor	Review Queue	<code>trpc.claims.approveClaim</code> (WRONG — placeholder)	BROKEN
Send Back to Risk Manager	Review Queue	<code>trpc.claims.approveClaim</code> (WRONG — placeholder)	BROKEN
Add Comment	Review Queue	<code>trpc.comments.addComment</code>	Working
Upload Document	Intake Queue	<code>trpc.documents.upload</code>	Working
Approve Fleet Manager	Fleet Approvals	<code>trpc.fleetAccounts.approveFleetManagerRequest</code>	Working
Reject Fleet Manager	Fleet Approvals	<code>trpc.fleetAccounts.rejectFleetManagerRequest</code>	Working

Send Back Workflow — Critical Bug Detail

The `handleSubmitSendBack` function in `ClaimsManagerDashboard.tsx` (line 321) calls:

```
sendBackClaim.mutate({ claimId: selectedClaim.id, selectedQuoteId: 0 });
```

Where `sendBackClaim` is defined at line 269 as:

```
const sendBackClaim = trpc.claims.approveClaim.useMutation({ ... });
```

The `approveClaim` procedure (routers.ts:3000) executes a **fraud check**, selects a quote, and transitions the claim to `repair_assigned` state via the WorkflowEngine. Calling it with `selectedQuoteId: 0` will either throw a “Quote not found” error (if no quote with ID 0 exists) or, if a quote exists, will incorrectly approve the claim. The workflow engine's `ROLE_TRANSITION_PERMISSIONS` map defines the correct send-back transitions:

- `technical_approval` → `internal_review` — allowed for `claims_manager`
- `financial_decision` → `technical_approval` — allowed for `claims_manager`

A dedicated `sendBackClaim` procedure must use these transitions.

Workflow State Coverage

Workflow State	Claims Manager Can See?	Claims Manager Can Act?
<code>intake_queue</code>	Yes (Intake tab)	Yes (assign, trigger AI)
<code>under_assessment</code>	Yes (Active tab)	Limited (view only)
<code>internal_review</code>	Yes (Active tab)	No direct action
<code>technical_approval</code>	Yes (Review Queue)	Yes (approve, send back)
<code>financial_decision</code>	Yes (Review Queue)	Yes (close, send back)
<code>payment_authorized</code>	Yes (Processed)	View only
<code>closed</code>	Yes (Processed)	View only
<code>disputed</code>	Yes (Active tab)	View only

Deliverable 5 — AI Utilisation Matrix

AI Outputs Consumed by Claims Manager

AI Output	Source	Consumed In	How Used
KINGA Estimated Cost	<code>ai_assessments.estimatedCost</code>	Comparison View (Column 1)	Compared against assessor and panel beater quotes
Fraud Risk Score	<code>ai_assessments.fraudRiskScore</code>	Fraud Alerts tab, Active Claims badges	Drives fraud alert queue population
Confidence Score	<code>ai_assessments.confidenceScore</code>	Comparison View	Displayed as percentage confidence
Damage Analysis	<code>ai_assessments</code> JSON	Comparison View Column 1	Part breakdown and severity
Vehicle Structural Intelligence	<code>trpc.vehicleStructural.getClaimProfile</code>	VehicleStructuralIntelligencePanel	ANCAP/CRASH3 safety rating
QMS Compliance	<code>QMSCompliancePanel</code>	Comparison View	Quality management compliance flags
Causal Reasoning	Pipeline Stage 5	Comparison View	Incident type and liability narrative
Photo Forensics	<code>photoForensicsEngine</code>	Comparison View (photo section)	EXIF integrity, manipulation score

AI Outputs NOT Consumed by Claims Manager

AI Output	Available In	Missing From
Claims Ageing Analysis	<code>analytics.getClaimsAgeing</code> (Executive Dashboard)	Claims Manager Dashboard
Fraud Investigation Funnel	<code>analytics.getFraudInvestigationFunnel</code> (Executive Dashboard)	Claims Manager Dashboard
Executive Alerts	<code>analytics.getExecutiveAlerts</code> (Executive Dashboard)	Claims Manager Dashboard
Portfolio Leakage Metric	<code>analytics.getMonthComparison</code> (Executive Dashboard)	Claims Manager Dashboard
Panel Beater Performance Trend	<code>reportDefinitions.generatePanelBeaterPerformanceReport</code>	Not surfaced in Claims Manager UI
Assessor Performance Ranking	<code>trpc.assessors.list</code> with performance scores	Not surfaced in Claims Manager UI

AI Intelligence Gap Assessment

The Claims Manager has access to per-claim AI intelligence but lacks portfolio-level AI intelligence. The Executive Dashboard has three AI-driven components (Alerts Centre, Claims Ageing, Fraud Funnel) that would be directly actionable for a claims manager but are not visible in their portal. This is the most significant intelligence gap.

Deliverable 6 — Report Catalogue Audit

Per-Claim Reports (Claims Manager Authorised)

Report Key	Report Name	Generator Function	UI Button Exists?	Status
<code>claim.assessment</code>	KINGA Claims Assessment	<code>generateClaimAssessmentReport</code>	Yes (Review Queue tab, line 767)	Working
<code>claim.forensic</code>	KINGA Forensic Audit	<code>generateForensicReport</code>	No	Authorised but not surfaced
<code>claim.cost_comparison</code>	Cost Comparison	<code>generateCostComparisonReport</code>	No	Authorised but not surfaced
<code>claim.repair_decision</code>	Repair Decision	<code>generateRepairDecisionReport</code>	No	Authorised but not surfaced
<code>claim.audit_trail</code>	Audit Trail	<code>generateAuditTrailReport</code>	No	Authorised but not surfaced

Portfolio Reports (Claims Manager Authorised)

Report Key	Report Name	Generator Function	UI Button Exists?	Status
<code>portfolio.claims_summary</code>	Claims Summary	<code>generateClaimsSummaryReport</code>	Yes (Dashboard header, line 380)	Working
<code>portfolio.dwell_time</code>	Dwell Time Analysis	<code>generateDwellTimeReport</code>	No	Authorised but not surfaced
<code>portfolio.panel_beater_performance</code>	Panel Beater Performance	<code>generatePanelBeaterPerformanceReport</code>	No	Authorised but not surfaced
<code>portfolio.fraud_summary</code>	Fraud Summary	<code>generateFraudSummaryReport</code>	No	Authorised but not surfaced
<code>portfolio.assessor_performance</code>	Assessor Performance	<code>generateAssessorPerformanceReport</code>	No	Authorised but not surfaced

Cross-Portal Reports (Claims Manager Authorised)

Report Key	Report Name	UI Entry Point	Status
<code>recovery.case_summary</code>	Recovery Case Summary	Reports Centre	Working (via Reports Centre)
<code>executive.claims_trend</code>	Claims Trend	Reports Centre	Working (via Reports Centre)
<code>executive.financial_exposure</code>	Financial Exposure	Reports Centre	Working (via Reports Centre)

Report Catalogue Summary

Of 10 reports authorised for `claims_manager`, only 2 have direct UI entry points within the Claims Manager Portal itself. The remaining 8 are accessible only through the Reports Centre (`/insurer-portal/reports-centre`), which requires the user to know

the report exists and navigate away from their primary workflow. This represents a significant discoverability gap.

Deliverable 7 — Missing Intelligence Register

Opportunity	Data Exists	Visible?	Effort	Impact
Claims ageing buckets (0–14, 15–29, 30–59, 60+ days)	Yes — <code>analytics.getClaimsAgeing</code>	No (Executive only)	Low	High — SLA breach prevention
Portfolio leakage metric (reserves vs. approved)	Yes — <code>analytics.getMonthComparison</code>	No (Executive only)	Low	High — financial control
Panel beater performance ranking	Yes — <code>generatePanelBeaterPerformanceReport</code>	No — report not surfaced	Low	High — repairer quality control
Assessor performance ranking	Yes — <code>trpc.assessors.list</code> with scores	No	Low	Medium — assessor management
Fraud investigation funnel	Yes — <code>analytics.getFraudInvestigationFunnel</code>	No (Executive only)	Low	High — fraud oversight
Send-back reason tracking	No — comments only, no structured field	No	Medium	High — workflow audit quality
Claims manager SLA breach alerts	No dedicated procedure	No	Medium	High — operational control
Cost variance trend (KINGA vs. approved)	Partial — per-claim only	No portfolio view	Medium	High — leakage detection
Repeat claimant detection	Partial — fraud score includes it	No dedicated view	Medium	High — fraud prevention
Assessor-to-outcome correlation	No	No	High	High — assessor quality management
Panel beater quote variance trend	Partial — per-claim comparison view	No portfolio trend	Medium	Medium — cost benchmarking
Workflow bottleneck identification	No	No	Medium	Medium — process improvement

Deliverable 8 — Missing Integration Register

Integration	Should Exist	Currently Exists	Gap
Recovery case creation notification	Claims Manager should be notified when a recovery case is created for a claim they managed	No	No notification trigger from recovery module to claims manager
Risk Manager escalation notification	Claims Manager should receive notification when risk manager escalates a claim	No	No notification trigger
Assessor assignment confirmation	Claims Manager should receive confirmation when assessor accepts assignment	No	No notification trigger
Financial approval threshold alert	Claims Manager should be alerted when a claim approaches the financial approval threshold	No	No threshold proximity alert
Fraud escalation to Fraud Manager	Claims Manager should be able to escalate directly to Fraud Manager from the Fraud Alerts tab	No dedicated route	Only available via comment/manual process
SLA breach notification	Claims Manager should receive automated alert when a claim exceeds dwell time threshold	No	No SLA monitoring trigger

Deliverable 9 — Improvement Plan

Critical Priority

Item	Effort	Impact	Owner
Fix <code>sendBackClaim</code> — replace <code>approveClaim</code> placeholder with dedicated procedure using WorkflowEngine transitions <code>technical_approval</code> → <code>internal_review</code> and <code>financial_decision</code> → <code>technical_approval</code>	1 day	Prevents incorrect approvals being recorded as send-backs	Engineering
Fix <code>closeForProcessing</code> — replace <code>approveClaim</code> with a distinct closure procedure that records the correct intent in the audit trail	1 day	Audit trail integrity	Engineering

High Priority

Item	Effort	Impact	Owner
Add per-claim report dropdown to Review Queue (<code>cost_comparison</code> , <code>repair_decision</code> , <code>audit_trail</code> , <code>forensic</code>)	1 day	Claims manager gains full report access within workflow	Engineering
Add Claims Ageing panel to Claims Manager Dashboard	0.5 day	Real-time SLA visibility	Engineering
Add Fraud Investigation Funnel to Claims Manager Fraud Alerts tab	0.5 day	Portfolio fraud oversight	Engineering
Add Fleet Approvals to sidebar navigation	0.5 day	Feature discoverability	Engineering
Add portfolio report buttons (<code>dwell_time</code> , <code>panel_beater_performance</code> , <code>fraud_summary</code>) to dashboard	1 day	Report discoverability	Engineering

Medium Priority

Item	Effort	Impact	Owner
Add structured <code>sendBackReason</code> field to send-back dialog and audit trail	1 day	Audit quality	Engineering
Add SLA breach alert component to dashboard	2 days	Operational control	Engineering
Add portfolio leakage metric to dashboard KPI cards	0.5 day	Financial control	Engineering
Add assessor performance panel to Intake Queue tab	1 day	Assessor management	Engineering

Low Priority

Item	Effort	Impact	Owner
Add Fleet Approvals count badge to sidebar	0.5 day	Discoverability	Engineering
Add export to Excel for Fraud Alerts tab	0.5 day	Reporting convenience	Engineering
Add claim count badges to sidebar navigation items	0.5 day	UX improvement	Engineering

Deliverable 10 — Portal Report Specification

Claims Management Report — Ideal Design

Purpose: Provide the head of claims with a comprehensive monthly portfolio intelligence report covering operational performance, financial outcomes, AI accuracy, and workflow efficiency.

Section 1 — Executive Summary

- KPIs: Total claims processed, total approved value, total savings identified, average processing time, fraud prevention rate
- AI Narrative: LLM-generated summary of the month's key trends and anomalies
- Data Sources: `claims` , `ai_assessments` , `quotes`

Section 2 — Claims Ageing Analysis

- KPIs: Count and value by ageing bucket (0–14, 15–29, 30–59, 60+ days)
- Chart: Horizontal bar chart by ageing bucket
- Data Sources: `analytics.getClaimsAgeing`

Section 3 — Financial Performance

- KPIs: Total reserves, total approved, total recovered, net exposure, leakage rate
- Chart: Month-on-month comparison bar chart
- Data Sources: `analytics.getMonthComparison`

Section 4 — Fraud Intelligence

- KPIs: Flagged count, investigated count, confirmed fraud count, prevented loss value
- Chart: Fraud investigation funnel
- Data Sources: `analytics.getFraudInvestigationFunnel` , `claims.fraudRiskScore`

Section 5 — Panel Beater Performance

- KPIs: Top 10 panel beaters by volume, average quote variance vs. KINGA estimate, quality score
- Chart: Scatter plot of quote variance vs. volume
- Data Sources: `generatePanelBeaterPerformanceReport`

Section 6 — Assessor Performance

- KPIs: Assessor ranking by performance score, average assessment accuracy vs. KINGA
- Chart: Performance ranking table
- Data Sources: `trpc.assessors.list` with performance scores

Section 7 — Workflow Bottleneck Analysis

- KPIs: Average dwell time per workflow stage, send-back rate by stage, escalation rate
- Chart: Funnel chart of claims through workflow stages
- Data Sources: `generateDwellTimeReport` , workflow audit trail

Section 8 — AI Accuracy Audit

- KPIs: KINGA estimate vs. approved amount variance, confidence score distribution, fraud score accuracy
- Chart: Scatter plot of KINGA estimate vs. approved amount
- Data Sources: `ai_assessments` , `claims.approvedAmount`

Deliverable 11 — Implementation Priority Matrix

Item	Priority	Effort (days)	Impact	Effort vs. Impact
Fix sendBackClaim bug	Critical	1	Prevents incorrect audit records	High ROI
Fix closeForProcessing	Critical	1	Audit trail integrity	High ROI
Per-claim report dropdown in Review Queue	High	1	Full report access in workflow	High ROI
Claims Ageing panel	High	0.5	SLA visibility	Very High ROI
Fraud Funnel in Fraud Alerts tab	High	0.5	Portfolio fraud oversight	Very High ROI
Fleet Approvals in sidebar	High	0.5	Feature discoverability	Very High ROI
Portfolio report buttons	High	1	Report discoverability	High ROI
Structured send-back reason field	Medium	1	Audit quality	Medium ROI
SLA breach alert component	Medium	2	Operational control	Medium ROI
Portfolio leakage KPI card	Medium	0.5	Financial control	High ROI
Assessor performance panel	Medium	1	Assessor management	Medium ROI
Fleet Approvals badge in sidebar	Low	0.5	UX improvement	Low ROI
Excel export for Fraud Alerts	Low	0.5	Reporting convenience	Low ROI
Claim count badges in sidebar	Low	0.5	UX improvement	Low ROI

Deliverable 12 — Cross-Portal Integration Map

This Portal	Other Portal	Direction	Data Passed	Status	Gap
Claims Manager	Claims Processor	Receives	Processed claims, AI assessments, assessor evaluations	Working — shared <code>claims</code> table	No notification when processor completes
Claims Manager	Risk Manager	Bidirectional	Technical approval decisions, send-back requests	Partially working — send-back is broken	<code>sendBackClaim</code> calls wrong procedure
Claims Manager	Recovery Portal	Feeds	Settled claims trigger recovery case creation	Working — automatic trigger on close	No notification back to claims manager when recovery case is created
Claims Manager	Executive Dashboard	Feeds	Portfolio metrics consumed by Executive KPIs	Working — shared analytics procedures	Claims Manager cannot see the same KPIs the Executive sees
Claims Manager	Fraud Analytics	Feeds	Fraud-flagged claims visible in Fraud Analytics	Working — shared <code>claims.fraudRiskScore</code>	No direct escalation path from Claims Manager to Fraud Manager
Claims Manager	Reports Centre	Bidirectional	Report generation and scheduling	Working — Reports Centre is role-aware	8 of 10 authorised reports are only accessible via Reports Centre, not from within the Claims Manager Portal
Claims Manager	Assessor Portal	Feeds	Assessor assignments	Working — <code>trpc.claims.assignToAssessor</code>	No feedback loop from assessor back to claims manager
Claims Manager	Fleet Manager	Receives	Fleet account approval requests	Working — <code>FleetManagerApprovalsTab</code>	Fleet Approvals tab is not linked from sidebar

Deliverable 13 — Production Readiness Verdict

Verdict: Conditional — Not Ready for Go-Live

The Claims Manager Portal is operationally functional for supervised use in a controlled environment. However, the `sendBackClaim` bug is a production-blocking defect. In a live insurer environment, a claims manager sending a claim back for review would instead trigger an approval action, creating incorrect audit records and potentially advancing claims through the workflow without proper review.

Readiness Scorecard

Dimension	Score	Notes
Navigation completeness	7/10	Fleet Approvals not in sidebar
Data accuracy	8/10	Demo fallbacks are correct pattern; real data queries are sound
Workflow completeness	5/10	sendBackClaim is broken; closeForProcessing is ambiguous
AI intelligence utilisation	6/10	Per-claim AI is good; portfolio AI is absent
Report coverage	4/10	2 of 10 authorised reports have direct UI entry points
Cross-portal integration	6/10	Core integrations work; notification triggers are missing
Audit trail quality	5/10	sendBackClaim creates wrong audit records
Overall	5.9/10	Conditional — fix critical bugs before go-live

Pre-Go-Live Checklist

- ☐ Fix `sendBackClaim` procedure (Critical — 1 day)
- ☐ Fix `closeForProcessing` procedure (Critical — 1 day)
- ☐ Add per-claim report dropdown to Review Queue (High — 1 day)
- ☐ Add Fleet Approvals to sidebar (High — 0.5 day)
- ☐ Add Claims Ageing panel to dashboard (High — 0.5 day)
- ☐ Verify all 6 DEMO_ fallbacks are not shown to live users (Medium — 0.5 day)

KINGA AutoVerify AI — Claims Manager Portal Audit v1.0
Produced using KINGA Portal Audit Master Prompt v1.1
Audit scope: `ClaimsManagerDashboard.tsx`, `ClaimsManagerComparisonView.tsx`, `InsurerClaimDetails.tsx`, `InsurerClaimsTriage.tsx`, `FleetManagerApprovalsTab.tsx`, `QMSCompliancePanel.tsx`, `VehicleStructuralIntelligencePanel.tsx`, `routers.ts` (claims namespace), `reportDefinitions.ts`, `workflow-engine.ts`, `rbac.ts`
