

KINGA AutoVerify AI — Recovery Portal Audit v1.0

Document Type: Portal Audit Report
Portal: Recovery Portal (Subrogation Module)
Audit Framework: KINGA Portal Audit Master Prompt v1.1 (10-Phase, 13 Deliverables)
Date: June 2026
Status: Production Readiness Assessment

Executive Summary

The Recovery Portal is KINGA's subrogation management module, enabling recovery officers to manage third-party liability cases from initial assessment through demand letter generation, settlement negotiation, and case closure. The portal is the most operationally complete of the three portals reviewed in this audit cycle, featuring a seven-status case queue, a contextual quick-action bar, an AI-powered demand letter generator, a correspondence log with PDF export, a repeat offender detection system, and a third-party insurer intelligence panel.

Critical Finding: The Recovery Portal has no per-case report buttons. Three reports are authorised for `recovery_officer` (`recovery.case_summary`, `recovery.performance`, `recovery.third_party_profiles`), but none are surfaced within the Recovery Portal UI. All reports are accessible only through the Reports Centre, which requires the officer to navigate away from the case they are working on.

Top 5 Recommendations:

- [High]** Add a `recovery.case_summary` report button to the Recovery Case Detail header, enabling officers to generate a formal case summary PDF without leaving the case view.
- [High]** Add a `recovery.performance` report button to the Recovery Portal dashboard, enabling officers to generate a performance report directly from the queue view.
- [High]** Add a `recovery.third_party_profiles` report button to the Third-Party Profiles page.
- [Medium]** Add a "Mark Under Investigation" quick action to the case detail — currently there is no UI path to transition a case to `under_investigation` status.
- [Medium]** Add a recovery trend chart to the dashboard (monthly recovery rate, quantum claimed vs. recovered) — the data exists in `getKPIs` but is not visualised.

Production Readiness Verdict: Ready for Go-Live with Enhancements. The core recovery workflow is fully functional. The missing report buttons and the `under_investigation` transition gap are significant usability issues but do not block core operations. The portal can go live with a commitment to address these items in the first post-launch sprint.

Deliverable 1 — Navigation Map

Portal Identity

Field	Value
Portal Name	Recovery Portal
Primary Role	<code>recovery_officer</code>
Route Prefix	<code>/insurer-portal/recovery</code>
Entry Component	<code>RecoveryPortal.tsx</code>
Case Detail Component	<code>RecoveryCaseDetail.tsx</code>
Lines of Code	362 (RecoveryPortal.tsx) + 1,153 (RecoveryCaseDetail.tsx) = 1,515 total
Layout	<code>InsurerPortalLayout</code> with role-scoped sidebar

Sidebar Navigation (10 Items across 4 Groups)

Group	Label	Description	Route	Status
Overview	Recovery Dashboard	Queue overview and KPIs	/insurer-portal/recovery	Working
Active Cases	Pending Review	New cases awaiting assessment	/insurer-portal/recovery?tab=pending	Working
Active Cases	Under Investigation	Cases with unresolved liability	/insurer-portal/recovery?tab=investigation	Working
Active Cases	Open Cases	Cases ready for demand action	/insurer-portal/recovery?tab=open	Working
Active Cases	Demand Sent	Outstanding demand responses	/insurer-portal/recovery?tab=demand-sent	Working
Active Cases	Disputed / Legal	Cases in dispute or legal referral	/insurer-portal/recovery?tab=legal	Working
Closed Cases	Settled Cases	Fully and partially recovered	/insurer-portal/recovery?tab=settled	Working
Closed Cases	Archived	Low-RPS cases not actioned	/insurer-portal/recovery?tab=archived	Working
Intelligence	Third-Party Profiles	Repeat third-party intelligence	/insurer-portal/recovery/third-party-profiles	Working
Intelligence	Relationship Intelligence	Entity network analysis	/insurer-portal/relationship-intelligence	Working
Reports	Recovery Reports	Generate recovery performance reports	/insurer-portal/reports-centre?tab=recovery	Working (via Reports Centre)

Case Status Lifecycle

Status	DB Value	Description	Quick Actions Available
Pending Review	pending_review	New case awaiting officer assessment	Mark Demand Sent, Escalate to Legal, Close No Recovery
Under Investigation	under_investigation	Liability not yet determined	Close No Recovery
Open	open	Ready for demand action	Mark Demand Sent, Record Settlement, Escalate to Legal
Demand Sent	demand_sent	Awaiting third-party response	Record Settlement, Response Received, Escalate to Legal
Disputed / Legal	disputed_legal	In dispute or referred to attorneys	Record Settlement
Settled Full	settled_full	100% recovery achieved	None (closed)
Settled Partial	settled_partial	Partial recovery achieved	None (closed)
Closed No Recovery	closed_no_recovery	Case closed without recovery	None (closed)
Archived	archived	Low-RPS case not actioned	None (closed)

Deliverable 2 — Orphaned Feature Register

Feature	Location	Status	Issue
<code>recovery.case_summary</code> report	<code>reportDefinitions.ts:111</code>	Authorised but not surfaced	No button in <code>RecoveryCaseDetail</code> — only accessible via Reports Centre
<code>recovery.performance</code> report	<code>reportDefinitions.ts:112</code>	Authorised but not surfaced	No button in <code>RecoveryPortal</code> dashboard — only accessible via Reports Centre
<code>recovery.third_party_profiles</code> report	<code>reportDefinitions.ts:113</code>	Authorised but not surfaced	No button in Third-Party Profiles page — only accessible via Reports Centre
Mark Under Investigation action	<code>RecoveryCaseDetail.tsx</code>	Missing	No UI path to transition case to <code>under_investigation</code> status
Recovery trend chart	<code>RecoveryPortal.tsx</code>	Missing	Monthly recovery rate data exists in <code>getKPIs</code> but not visualised
Case assignment UI	<code>RecoveryCaseDetail.tsx</code>	Partial	<code>assignCase</code> procedure exists but no UI for officers to self-assign or managers to assign
Demand letter resend	<code>RecoveryCaseDetail.tsx</code>	Partial	<code>generateDemandLetter</code> can be called again but no explicit “Resend” button for <code>demand_sent</code> status
Liability denied status	<code>drizzle/schema.ts:4939</code>	Schema only	<code>liability_denied</code> is in the DB enum but not in the <code>STATUS_CARDS</code> array or <code>STATUS_META</code> — cases in this status are invisible in the UI
Archive action	<code>RecoveryCaseDetail.tsx</code>	Missing	No quick action to archive a case from the case detail view

Deliverable 3 — Data Lineage Matrix

Recovery Portal Dashboard Data

Data Point	tRPC Procedure	DB Table	Notes
Total cases	<code>trpc.recovery.getKPIs</code>	<code>recovery_cases</code> WHERE <code>tenantId = ?</code>	All cases, no date filter
Pending review count	<code>trpc.recovery.getKPIs</code>	<code>recovery_cases</code> WHERE <code>status = 'pending_review'</code>	Real-time count
Open cases count	<code>trpc.recovery.getKPIs</code>	<code>recovery_cases</code> WHERE <code>status = 'open'</code>	Real-time count
Demand sent count	<code>trpc.recovery.getKPIs</code>	<code>recovery_cases</code> WHERE <code>status = 'demand_sent'</code>	Real-time count
Total recovered	<code>trpc.recovery.getKPIs</code>	SUM <code>recovery_cases.recovered_amount</code>	In cents
Total settlement amount	<code>trpc.recovery.getKPIs</code>	SUM <code>recovery_cases.approved_settlement_amount</code>	In cents
Recovery rate	<code>trpc.recovery.getKPIs</code>	Calculated: <code>totalRecovered / totalSettlementAmount * 100</code>	Percentage
Avg RPS	<code>trpc.recovery.getKPIs</code>	AVG <code>recovery_cases.recovery_potential_score</code>	0–100 score
Approaching deadlines	<code>trpc.recovery.getKPIs</code>	COUNT cases WHERE <code>recoveryDeadline ≤ NOW() + 90 days</code>	90-day warning window
Case list	<code>trpc.recovery.getCases</code>	<code>recovery_cases</code> with optional <code>status</code> filter	Paginated, sorted by RPS

Recovery Case Detail Data

Data Point	tRPC Procedure	DB Table	Notes
Case details	<code>trpc.recovery.getCase</code>	<code>recovery_cases</code> JOIN <code>claims</code>	Full case with claim context
Correspondence log	<code>trpc.recovery.getCorrespondenceLog</code>	<code>recovery_correspondence_log</code>	Ordered by <code>created_at</code> DESC
Prior cases	<code>trpc.recovery.getPriorCases</code>	<code>recovery_cases</code> WHERE <code>id IN (priorCaseIds)</code>	Repeat offender panel
Third-party profiles	<code>trpc.recovery.getThirdPartyProfiles</code>	<code>recovery_cases</code> GROUP BY <code>thirdPartyRegistration</code>	Repeat offender intelligence

Insurer Intelligence Data

Data Point	tRPC Procedure	Aggregation	Notes
Settlement rate per insurer	<code>trpc.recovery.getInsurerIntelligence</code>	<code>settled / total * 100</code>	Per third-party insurer
Dispute rate per insurer	<code>trpc.recovery.getInsurerIntelligence</code>	<code>disputed / total * 100</code>	Per third-party insurer
Avg days to settle	<code>trpc.recovery.getInsurerIntelligence</code>	AVG days from <code>demandLetterSentAt</code> to <code>settlementAgreementDate</code>	Per third-party insurer
Recovery efficiency	<code>trpc.recovery.getInsurerIntelligence</code>	<code>totalRecovered / totalApproved * 100</code>	Per third-party insurer

Deliverable 4 — Workflow Intelligence Assessment

Recovery Workflow Position

The Recovery Portal operates as a downstream module that receives cases automatically when a claim is approved and a third-party liability is identified. The recovery workflow is independent of the main claims workflow and has its own status lifecycle.

```
Claims Workflow: Approved → [Automatic trigger] → Recovery Case Created (pending_review)
Recovery Workflow:
  pending_review → under_investigation → open → demand_sent → settled_full/settled_partial
                                                         → disputed_legal → settled_full/settled_partial
                                                         → closed_no_recovery
                                                         → archived
```

Quick Action Availability by Status

Status	Mark Demand Sent	Record Settlement	Response Received	Escalate to Legal	Close No Recovery
<code>pending_review</code>	Yes	No	No	Yes	Yes
<code>under_investigation</code>	No	No	No	No	Yes
<code>open</code>	Yes	Yes	No	Yes	No
<code>demand_sent</code>	No	Yes	Yes	Yes	No
<code>disputed_legal</code>	No	Yes	No	No	No

Missing Transition: Under Investigation

There is no quick action to transition a case to `under_investigation` status from the case detail view. The `under_investigation` status is defined in the schema and the sidebar navigation, but the only way to reach it is through the `updateCase` procedure with a direct status change — which requires a developer or admin to call the API directly. Recovery officers have no UI path to mark a case as under investigation.

Demand Letter Generation

The demand letter generator is one of the most sophisticated features in the Recovery Portal. It uses the LLM (`invokeLLM`) to generate a formal demand letter on insurer letterhead, incorporating:

- Insurer branding (name, logo, FSP number, registration number)
- Claim details (claim number, incident date, vehicle, police report)
- Third-party details (name, insurer, policy number, address)
- Legal basis for the demand (subrogation rights)
- Settlement amount and deadline

The letter is rendered to PDF using Puppeteer and uploaded to S3. The download URL is returned to the frontend and logged in the correspondence log automatically.

Constraint: Demand letters can only be generated for cases in `open` , `demand_sent` , or `pending_review` status. Attempting to generate a letter for a case in any other status will return a `BAD_REQUEST` error.

Deadline Alert System

The recovery deadline alert system (`recoveryDeadlineAlerts.ts`) runs on server startup and checks for cases where the recovery deadline is approaching. Alerts are sent at 90, 60, 30, 14, and 7 days before the deadline. Alerts are sent to the assigned recovery officer (or the insurer admin if no officer is assigned) via the Manus notification system. A minimum 6-day gap between alerts for the same case prevents duplicate notifications.

Deliverable 5 — AI Utilisation Matrix

AI Outputs Consumed by Recovery Portal

AI Output	Source	Consumed In	How Used
Recovery Potential Score (RPS)	<code>recovery_cases.recoveryPotentialScore</code>	Case list, case detail	Case prioritisation — 0–100 score
Repeat Offender Flag	<code>recovery_cases.isRepeatOffender</code>	Case detail header	Repeat offender alert banner
Prior Case Count	<code>recovery_cases.priorCaseCount</code>	Case detail header	Number of prior recovery cases
AI Demand Letter	<code>invokeLLM</code> via <code>demandLetterGenerator.ts</code>	Case detail quick action	Full demand letter generation
Police Report Extraction	<code>policeReportExtractedAt</code> field	Case detail	Police report data pre-populated from KINGA AI pipeline
Third-Party Insurer Intelligence	<code>trpc.recovery.getInsurerIntelligence</code>	Recovery Portal dashboard	Settlement/dispute patterns per insurer
Accident Clusters	<code>trpc.intelligence.getAccidentClusters</code>	Relationship Intelligence	Geographic fraud clustering

AI Outputs NOT Consumed by Recovery Portal

AI Output	Available In	Missing From
KINGA Fraud Risk Score	<code>claims.fraudRiskScore</code>	Not displayed in recovery case detail
KINGA AI Assessment Narrative	<code>ai_assessments.aiNarrative</code>	Not displayed in recovery case detail
Physics Deviation Score	<code>ai_assessments.physicsDeviationScore</code>	Not displayed in recovery case detail
Vehicle Structural Intelligence	<code>vehicleStructural.getClaimProfile</code>	Not displayed in recovery case detail
Exception Intelligence Recommendations	<code>trpc.exceptionIntelligence.getActionableRecommendations</code>	Not surfaced in Recovery Portal
FCDI Score	<code>ai_assessments</code>	Not displayed in recovery case detail

AI Intelligence Gap Assessment

The Recovery Portal makes excellent use of the AI demand letter generator and the RPS scoring system. However, the original KINGA AI assessment data (fraud risk score, physics deviation, AI narrative) from the claims workflow is not surfaced in the recovery case detail. This means a recovery officer working on a case where the original claim had a high fraud risk score has no visibility of that intelligence without navigating to the original claim in the Claims Portal.

The most impactful addition would be a “KINGA Intelligence Summary” panel in the case detail that shows the original claim's fraud risk score, AI assessment narrative, and any FCDI flags — providing the recovery officer with the full context of why the claim was approved and what risks were identified.

Deliverable 6 — Report Catalogue Audit

Recovery Portal Reports

Report Key	Report Name	Generator Function	Authorised Roles
<code>recovery.case_summary</code>	Recovery Case Summary	<code>generateRecoveryCaseSummaryReport</code>	<code>insurer_admin</code> , <code>recovery_officer</code> <code>claims_manager</code>
<code>recovery.performance</code>	Recovery Performance	<code>generateRecoveryPerformanceReport</code>	<code>insurer_admin</code> , <code>recovery_officer</code> <code>risk_manager</code> , <code>executive</code>
<code>recovery.third_party_profiles</code>	Third-Party Profiles	<code>generateRecoveryThirdPartyProfilesReport</code>	<code>insurer_admin</code> , <code>recovery_officer</code> <code>risk_manager</code>

Report Catalogue Summary

All three recovery reports are accessible only through the Reports Centre (`/insurer-portal/reports-centre?tab=recovery`). There are no report buttons within the Recovery Portal itself. This means a recovery officer must navigate away from their current case to generate any report, which disrupts the workflow.

The `recovery.case_summary` report is particularly important — it should be accessible directly from the case detail view, as it provides a formal PDF summary of the case that can be attached to correspondence or submitted to management.

Correspondence Log Export

The `exportCorrespondenceLog` procedure generates a PDF of the full correspondence log for a case and uploads it to S3. This is the only report-like feature within the Recovery Portal UI, and it is accessible via a download button in the correspondence log panel. This is working correctly.

Deliverable 7 — Missing Intelligence Register

Opportunity	Data Exists	Visible?	Effort	Impact
Monthly recovery rate trend chart	Yes — <code>getKPIs</code> returns per-status counts	No	Low	High — portfolio performance visibility
Quantum claimed vs. recovered trend	Yes — <code>totalRecovered</code> , <code>totalSettlementAmount</code>	No	Low	High — financial performance visibility
Original claim fraud risk score in case detail	Yes — <code>claims.fraudRiskScore</code>	No	Low	High — fraud context for recovery decisions
KINGA AI assessment narrative in case detail	Yes — <code>ai_assessments.aiNarrative</code>	No	Low	High — full claim context
Per-insurer recovery rate trend (month-on-month)	Partial — <code>getInsurerIntelligence</code> is static	No	Medium	High — negotiation intelligence
RPS distribution chart	Yes — <code>recovery_cases.recoveryPotentialScore</code>	No	Low	Medium — portfolio prioritisation
Deadline countdown calendar	Yes — <code>recoveryDeadline</code> field	No	Medium	Medium — deadline management
Recovery officer productivity metrics	Partial — <code>assignedOfficerUserId</code> + status changes	No	Medium	Medium — team management
Case ageing analysis (0–30, 31–60, 60+ days)	Yes — <code>createdAt</code> field	No	Low	Medium — SLA management
Third-party insurer blacklist / watch list	No	No	High	Medium — risk management
Recovery success rate by incident type	Yes — <code>claims.incidentType</code> + <code>recovery_cases.status</code>	No	Low	Medium — portfolio intelligence

Deliverable 8 — Missing Integration Register

Integration	Should Exist	Currently Exists	Gap
KINGA AI assessment data in case detail	Recovery officer should see original claim's fraud risk score and AI narrative	No	<code>claims.fraudRiskScore</code> and <code>ai_assessments</code> are not joined in <code>getCase</code>
Claims Portal link from case detail	Recovery officer should be able to navigate to the original claim in the Claims Portal	Partial — <code>claimNumber</code> is displayed but not linked	No hyperlink to <code>/insurer/claims/{claimId}/comparison</code>
Case assignment notification	Recovery officer should be notified when a case is assigned to them	No	<code>assignCase</code> procedure exists but no notification trigger
Settlement notification to claims manager	Claims manager should be notified when a recovery case is settled	No	No notification trigger on settlement
Demand letter delivery confirmation	System should record when the demand letter was physically sent (not just generated)	Partial — <code>demandLetterSentAt</code> field exists but is set by "Mark Demand Sent" action, not by the letter generator	Letter generator sets <code>demandLetterUrl</code> but not <code>demandLetterSentAt</code>
Recovery outcome feedback to risk manager	Risk manager should see recovery outcomes for claims they approved	No	No feedback loop from recovery to risk manager
Legal referral integration	Cases in <code>disputed_legal</code> should have a path to record attorney details and legal file reference	No	No attorney details fields in schema
Police report re-extraction	Recovery officer should be able to trigger re-extraction of police report data if the initial extraction was incomplete	No	No re-extraction trigger in UI

Deliverable 9 — Improvement Plan

Critical Priority

There are no critical (blocking) issues in the Recovery Portal. The core workflow is fully functional.

High Priority

Item	Effort	Impact	Owner
Add <code>recovery.case_summary</code> report button to RecoveryCaseDetail header	0.5 day	Formal case summary PDF from case view	Engineering
Add <code>recovery.performance</code> report button to RecoveryPortal dashboard	0.5 day	Performance report from queue view	Engineering
Add <code>recovery.third_party_profiles</code> report button to Third-Party Profiles page	0.5 day	Third-party report from intelligence view	Engineering
Add “Mark Under Investigation” quick action to case detail	0.5 day	Enables formal investigation status transition	Engineering
Surface <code>liability_denied</code> status in STATUS_CARDS and STATUS_META	0.5 day	Cases in this status are currently invisible in the UI	Engineering

Medium Priority

Item	Effort	Impact	Owner
Add monthly recovery rate trend chart to dashboard	1 day	Portfolio performance visibility	Engineering
Add KINGA AI intelligence summary panel to case detail	1 day	Full claim context for recovery decisions	Engineering
Add hyperlink from case detail to original claim in Claims Portal	0.5 day	Cross-portal navigation	Engineering
Add case assignment notification	0.5 day	Officer workflow communication	Engineering
Add settlement notification to claims manager	0.5 day	Cross-portal workflow communication	Engineering
Add “Archive” quick action to case detail	0.5 day	Enables archiving from case view	Engineering
Add case ageing analysis to dashboard	0.5 day	SLA management	Engineering
Add RPS distribution chart to dashboard	0.5 day	Portfolio prioritisation	Engineering

Low Priority

Item	Effort	Impact	Owner
Add attorney details fields to recovery case schema	1 day	Legal referral tracking	Engineering
Add per-insurer recovery rate trend (month-on-month)	1 day	Negotiation intelligence	Engineering
Add recovery officer productivity metrics	1 day	Team management	Engineering
Add deadline countdown calendar view	1.5 days	Deadline management	Engineering
Add police report re-extraction trigger	1 day	Data quality	Engineering

Deliverable 10 — Portal Report Specification

Recovery Case Summary Report — Ideal Design

Purpose: Provide a formal PDF summary of a single recovery case, suitable for management review, legal submission, or file archiving.

Section 1 — Case Header

- Case ID, claim number, insurer name, recovery officer name
- Case status, opened date, recovery deadline
- Recovery Potential Score (RPS) with colour coding
- Data Sources: `recovery_cases` , `users` , `tenants`

Section 2 — Claim Context

- Vehicle registration, make, model, year
- Incident date, incident type, incident location
- Police report number, police station
- KINGA fraud risk score and AI assessment summary
- Approved settlement amount
- Data Sources: `claims` , `ai_assessments`

Section 3 — Third-Party Details

- Third-party name, registration, ID number
- Third-party insurer, policy number, contact details
- Recovery target (insurer vs. individual)
- Repeat offender flag and prior case count
- Data Sources: `recovery_cases`

Section 4 — Recovery Actions Timeline

- Full correspondence log (demand letters, responses, status changes)
- Demand letter sent date, response due date, response received date
- Settlement agreement date and amount
- Data Sources: `recovery_correspondence_log`

Section 5 — Financial Summary

- Approved settlement amount, recovered amount, recovery rate
- Currency code, settlement type (full/partial)
- Data Sources: `recovery_cases`

Section 6 — Officer Notes

- Full officer notes history
 - Data Sources: `recovery_cases.officerNotes`
-

Deliverable 11 — Implementation Priority Matrix

Item	Priority	Effort (days)	Impact	Effort vs. Impact
<code>recovery.case_summary</code> report button in case detail	High	0.5	Formal case summary from case view	Very High ROI
<code>recovery.performance</code> report button in dashboard	High	0.5	Performance report from queue view	Very High ROI
<code>recovery.third_party_profiles</code> report button	High	0.5	Third-party report from intelligence view	Very High ROI
Mark Under Investigation quick action	High	0.5	Investigation status transition	Very High ROI
Surface <code>liability_denied</code> status in UI	High	0.5	Invisible cases made visible	Very High ROI
Monthly recovery rate trend chart	Medium	1	Portfolio performance visibility	High ROI
KINGA AI intelligence summary in case detail	Medium	1	Full claim context	High ROI
Claims Portal hyperlink from case detail	Medium	0.5	Cross-portal navigation	High ROI
Case assignment notification	Medium	0.5	Officer workflow communication	High ROI
Settlement notification to claims manager	Medium	0.5	Cross-portal communication	High ROI
Archive quick action	Medium	0.5	Case management	Medium ROI
Case ageing analysis	Medium	0.5	SLA management	Medium ROI
Attorney details fields	Low	1	Legal referral tracking	Low ROI
Per-insurer recovery trend	Low	1	Negotiation intelligence	Medium ROI
Recovery officer productivity metrics	Low	1	Team management	Low ROI

Deliverable 12 — Cross-Portal Integration Map

This Portal	Other Portal	Direction	Data Passed	Status	Gap
Recovery Portal	Claims Workflow	Receives	Approved claims automatically create recovery cases	Working — <code>createRecoveryCase</code> trigger on claim approval	No notification to recovery officer when new case is created
Recovery Portal	Claims Portal	Reads	<code>claimNumber</code> , <code>vehicleRegistration</code> , <code>incidentDate</code> displayed in case detail	Working — <code>getCase</code> joins <code>claims</code>	No hyperlink to original claim; fraud risk score not joined
Recovery Portal	Risk Manager	Feeds	Recovery outcomes (settled, closed) visible in Risk Manager portfolio	Partial — shared <code>recovery_cases</code> table	No notification to risk manager on settlement
Recovery Portal	Claims Manager	Feeds	Recovery performance metrics visible in Claims Manager analytics	Partial — shared <code>recovery_cases</code> table	No notification to claims manager on settlement
Recovery Portal	Executive Dashboard	Feeds	Recovery rate, total recovered visible in Executive KPIs	Working — <code>analytics.getExecutiveAlerts</code> includes recovery data	No dedicated recovery trend in Executive Dashboard
Recovery Portal	Relationship Intelligence	Consumes	Entity network analysis	Working — shared <code>trpc.intelligence.*</code>	Not surfaced in Recovery Portal dashboard
Recovery Portal	Reports Centre	Bidirectional	Report generation	Working — Reports Centre is role-aware	All 3 recovery reports only accessible via Reports Centre
Recovery Portal	Notification System	Sends	Deadline alerts to assigned officer	Working — <code>recoveryDeadlineAlerts.ts</code>	Assignment notification missing; settlement notification missing

Deliverable 13 — Production Readiness Verdict

Verdict: Ready for Go-Live with Enhancements

The Recovery Portal is the most operationally complete portal in the KINGA platform. The core subrogation workflow — from case creation through demand letter generation, settlement recording, and closure — is fully functional and backed by a comprehensive database schema, an AI demand letter generator, a correspondence log, and a deadline alert system.

The missing report buttons and the `under_investigation` transition gap are significant usability issues but do not block core operations. The `liability_denied` status being invisible in the UI is a data integrity concern that should be resolved before go-live.

Readiness Scorecard

Dimension	Score	Notes
Navigation completeness	9/10	Comprehensive sidebar with 10 items
Data accuracy	9/10	Real-time case data; KPIs are accurate
Workflow completeness	8/10	Core workflow complete; <code>under_investigation</code> transition missing; <code>liability_denied</code> invisible
AI intelligence utilisation	7/10	Excellent demand letter AI; original claim AI data not surfaced
Report coverage	2/10	0 of 3 authorised reports have direct UI entry points
Cross-portal integration	7/10	Core integrations work; notification triggers missing; no claims portal link
Audit trail quality	9/10	Comprehensive correspondence log with PDF export
Overall	7.3/10	Ready for go-live with enhancements

Pre-Go-Live Checklist

- ☐ Add `recovery.case_summary` report button to case detail (High — 0.5 day)
- ☐ Add `recovery.performance` report button to dashboard (High — 0.5 day)
- ☐ Add `recovery.third_party_profiles` report button to Third-Party Profiles (High — 0.5 day)
- ☐ Add “Mark Under Investigation” quick action (High — 0.5 day)
- ☐ Surface `liability_denied` status in STATUS_CARDS and STATUS_META (High — 0.5 day)

Post-Launch Sprint Recommendations

- Add KINGA AI intelligence summary panel to case detail (Medium — 1 day)
- Add hyperlink from case detail to original claim (Medium — 0.5 day)
- Add monthly recovery rate trend chart to dashboard (Medium — 1 day)
- Add case assignment and settlement notifications (Medium — 1 day)

KINGA AutoVerify AI — Recovery Portal Audit v1.0
Produced using KINGA Portal Audit Master Prompt v1.1
Audit scope: `RecoveryPortal.tsx`, `RecoveryCaseDetail.tsx`, `routers.ts` (`recovery namespace`), `reportDefinitions.ts`, `demandLetterGenerator.ts`, `recoveryDeadlineAlerts.ts`, `drizzle/schema.ts` (`recovery_cases`, `recovery_correspondence_log`)
