

KINGA AutoVerify AI — Risk Manager Portal Audit v1.0

Document Type: Portal Audit Report
Portal: Risk Manager
Audit Framework: KINGA Portal Audit Master Prompt v1.1 (10-Phase, 13 Deliverables)
Date: June 2026
Status: Production Readiness Assessment

Executive Summary

The Risk Manager Portal is the financial governance and fraud oversight layer of the KINGA platform. The risk manager sits between the claims processor and financial closure, providing technical approval for claims, authorising high-value payments, managing escalations, and consuming portfolio-level risk intelligence. The portal is well-structured and operationally functional, with a five-tab decision dashboard, five intelligence sub-portals, and a dedicated analytics page with six Chart.js visualisations.

Critical Finding: The “Reject” action in the Approval Queue dialog has no backend procedure. When a risk manager clicks “Reject,” the system shows a toast notification (“Rejection workflow will move claim to disputed status”) but does not call any mutation — the claim’s workflow state is never updated. This means rejected claims remain in the approval queue indefinitely.

Top 5 Recommendations:

- [Critical]** Implement a `rejectClaim` procedure that transitions the claim to `disputed` workflow state via the `WorkflowEngine`, with a mandatory rejection reason recorded in the audit trail.
- [High]** Implement a `requestInfo` procedure that records the information request as a structured comment and optionally notifies the assigned claims processor.
- [High]** The `risk_manager_portfolio` report key is an alias for `generateFraudSummaryReport` — this is misleading. A dedicated risk manager portfolio report should be implemented that covers technical approval rates, fraud prevention, financial exposure, and workflow bottlenecks.
- [High]** The Risk Analytics page (6 Chart.js visualisations) is gated to `tier-enterprise` only. This is a significant intelligence gap for risk managers on lower tiers. Consider making core KPIs available on all tiers.
- [Medium]** Add per-claim report buttons (`claim.forensic` , `claim.audit_trail`) to the Approval Queue tab — these are authorised for `risk_manager` but are not surfaced in the dashboard UI.

Production Readiness Verdict: Conditional — Not Ready for Go-Live. The rejection workflow is non-functional, which means the risk manager cannot formally reject a claim through the system. This must be resolved before go-live.

Deliverable 1 — Navigation Map

Portal Identity

Field	Value
Portal Name	Risk Manager Portal
Primary Role	<code>risk_manager</code>
Route Prefix	<code>/insurer-portal/risk-manager</code>
Entry Component	<code>RiskManagerDashboard.tsx</code>
Lines of Code	~750 (<code>RiskManagerDashboard.tsx</code>) + ~1,078 (<code>RiskManagerAnalytics.tsx</code>)
Layout	<code>InsurerPortalLayout</code> with role-scoped sidebar

Sidebar Navigation
(9 Items across 3 Groups)

Group	Label	Description	Route	Status
Overview	My Dashboard	Approval queue and risk scoring	/insurer-portal/risk-manager	Working
Decisions	Approval Queue	Claims awaiting technical approval	/insurer-portal/risk-manager?tab=approval	Working
Decisions	High-Value Claims	Claims above financial threshold	/insurer-portal/risk-manager?tab=financial	Working
Decisions	Escalations	Claims escalated from processors	/insurer-portal/risk-manager?tab=escalations	Working
Intelligence	Fraud Analytics	Risk patterns and FCDI flags	/insurer/fraud-analytics	Working
Intelligence	Exception Hub	Anomalies requiring review	/insurer-portal/exception-intelligence	Working
Intelligence	Relationship Intelligence	Entity network analysis	/insurer-portal/relationship-intelligence	Working
Intelligence	Workflow Analytics	Decision times and outcomes	/insurer-portal/workflow-analytics	Working
Intelligence	Risk Analytics	Own-book motor intelligence	/insurer-portal/risk-analytics	Enterprise tier only
Reports	Reports Centre	Risk and portfolio reports	/insurer-portal/reports-centre	Working

Dashboard Tab Structure
(5 Tabs)

Tab	Value	Primary Purpose	Data Source
Approval Queue	approval	Claims awaiting technical approval	trpc.claims.byStatus({ status: "technical_approval" })
High-Value Claims	financial	Claims above financial threshold	trpc.claims.getFinancialDecisionQueue
Escalations	escalations	Disputed / high-fraud claims	trpc.claims.getEscalations
Portfolio Oversight	oversight	All active claims portfolio view	trpc.claims.getActiveClaims
Notifications	notifications	In-app notification inbox	NotificationsInbox component

Intelligence Sub-Portals

Portal	Component	tRPC Namespace	Status
Fraud Analytics	FraudAnalyticsDashboard.tsx	trpc.claims.allForTenant	Working
Exception Intelligence Hub	ExceptionIntelligenceHub.tsx	trpc.exceptionIntelligence.*	Working
Relationship Intelligence	RelationshipIntelligence.tsx	trpc.intelligence.*	Working
Workflow Analytics	WorkflowAnalyticsDashboard.tsx	trpc.workflowAnalytics.*	Working
Risk Analytics	RiskManagerAnalytics.tsx	trpc.analytics.getRiskManagerKPIs	Enterprise tier only

Deliverable 2 — Orphaned Feature Register

Feature	Location	Status	Issue
Reject Claim action	<code>RiskManagerDashboard.tsx:173</code>	Broken	Shows toast but calls no mutati — claim state never updated
Request Info action	<code>RiskManagerDashboard.tsx:177</code>	Broken	Shows toast but calls no mutati — no structured record created
<code>claim.forensic</code> report	<code>reportDefinitions.ts:69</code>	Authorised but not surfaced	<code>risk_manager</code> is authorised no button in RiskManagerDashboard
<code>claim.audit_trail</code> report	<code>reportDefinitions.ts:71</code>	Authorised but not surfaced	Same — authorised but no UI entry point
<code>portfolio.dwell_time</code> report	<code>reportDefinitions.ts:76</code>	Authorised but not surfaced	No button in Risk Manager UI
<code>portfolio.panel_beater_performance</code> report	<code>reportDefinitions.ts:77</code>	Authorised but not surfaced	No button in Risk Manager UI
<code>portfolio.fraud_summary</code> report	<code>reportDefinitions.ts:80</code>	Authorised but not surfaced	No dedicated button — only accessible via Reports Centre
<code>portfolio.assessor_performance</code> report	<code>reportDefinitions.ts:82</code>	Authorised but not surfaced	No button in Risk Manager UI
<code>risk_manager_portfolio</code> report	<code>reportDefinitions.ts:83</code>	Misleading alias	Calls <code>generateFraudSummaryRept</code> — not a comprehensive risk portfolio report
<code>recovery.performance</code> report	<code>reportDefinitions.ts:112</code>	Authorised but not surfaced	No button in Risk Manager UI
<code>recovery.third_party_profiles</code> report	<code>reportDefinitions.ts:113</code>	Authorised but not surfaced	No button in Risk Manager UI
Risk Analytics page	<code>RiskManagerAnalytics.tsx</code>	Tier-gated	Requires <code>tier-enterprise</code> unavailable on lower tiers

Deliverable 3 — Data Lineage Matrix

Approval Queue Data

Data Point	tRPC Procedure	DB Table	Notes
Claims in technical_approval	<code>trpc.claims.byStatus({ status: "technical_approval" })</code>	<code>claims WHERE workflowState = 'technical_approval'</code>	Real-time queue
Fraud risk score	<code>claims.fraudRiskScore</code>	<code>claims.fraud_risk_score</code>	From AI assessment pipeline
Estimated cost	<code>claims.estimatedCost</code>	<code>claims.estimated_repair_cost</code>	KINGA AI estimate
Approved amount	<code>claims.approvedAmount</code>	<code>claims.approved_amount</code>	Set by approveClaim

Financial Decision Queue Data

Data Point	tRPC Procedure	DB Table	Notes
High-value claims	<code>trpc.claims.getFinancialDecisionQueue</code>	<code>claims WHERE approvedAmount > threshold</code>	Thres from auton policy
Financial threshold	<code>getActiveAutomationPolicy</code>	<code>automation_policies.requireManagerApprovalAbove</code>	Defal 25,00 USD

Portfolio Analytics Data

Data Point	tRPC Procedure	DB Table	Notes
Risk portfolio analytics	<code>trpc.claims.getRiskPortfolioAnalytics</code>	<code>claims , ai_assessments</code>	Aggregated portfolio metrics
Escalated claims	<code>trpc.claims.getEscalations</code>	<code>claims WHERE workflowState IN ('disputed', 'manual_review') OR fraudRiskScore ≥ 70</code>	Fraud + workflow escalations

Risk Analytics KPIs (Enterprise Only)

KPI	SQL Query	DB Tables
Claims frequency by incident type	Monthly COUNT by <code>incident_type</code>	<code>claims</code>
Avg repair cost by vehicle age	AVG <code>approved_amount</code> by age bucket	<code>claims</code>
Fraud flag rate by incident type	COUNT by <code>fraud_risk_level</code>	<code>claims</code>
TP recovery exposure by month	SUM <code>quantum_claimed</code> and <code>recovered_amount</code>	<code>recovery_cases</code>
Repeat offender rate	COUNT repeat TP registrations	<code>recovery_cases</code>
Claim cycle time	AVG days from <code>created_at</code> to <code>closed_at</code>	<code>claims</code>

Deliverable 4 — Workflow Intelligence Assessment

Risk Manager Workflow Position

The risk manager occupies the technical governance gate in the claims workflow. Their primary workflow position is:

Under Assessment → Internal Review → [Risk Manager: Technical Approval]
→ Financial Decision ← [Risk Manager: Financial Authorisation]
→ Payment Authorized → Closed

The risk manager also manages the escalation path for disputed claims and high-fraud cases.

Workflow Actions Available

Action	UI Location	Backend Procedure	Status
Technical Approval	Approval Queue tab	<code>trpc.claims.approveClaim</code>	Working
Financial Authorisation	High-Value Claims tab	<code>trpc.claims.financialApproval</code>	Working
Reject Claim	Approval Queue tab	None — toast only	BROKEN
Request Info	Approval Queue tab	None — toast only	BROKEN
Re-trigger AI Assessment	Escalations tab	<code>AiAssessButton</code> component	Working
View Claim Detail	All tabs	Link to comparison view	Working

Reject Claim Bug Detail

The `handleSubmit` function in `RiskManagerDashboard.tsx` (line 171) contains:

```
} else if (dialogMode === "reject") {  
  toast.info("Rejection workflow will move claim to disputed status.");  
  setShowDialog(false);  
}
```

No mutation is called. The claim's `workflowState` remains `technical_approval`. The claim will continue to appear in the Approval Queue on every subsequent page load. The correct implementation should call a `rejectClaim` procedure that uses the WorkflowEngine transition `technical_approval → disputed` (which is defined in `WORKFLOW_TRANSITIONS` in `rbac.ts`).

Request Info Bug Detail

Similarly, the `request_info` dialog mode (line 177) only shows a toast and closes the dialog. No comment is added to the claim, no notification is sent to the processor, and no structured record is created. This means the risk manager has no reliable way to formally request additional information from the claims processor.

Workflow State Coverage

Workflow State	Risk Manager Can See?	Risk Manager Can Act?
intake_queue	No (not in sidebar)	No
under_assessment	Yes (Portfolio Oversight)	View only
internal_review	Yes (Portfolio Oversight)	Can send back from technical_approval
technical_approval	Yes (Approval Queue)	Yes (approve, reject [broken], request info [broken])
financial_decision	Yes (High-Value Claims)	Yes (authorise payment)
payment_authorized	Yes (Portfolio Oversight)	View only
closed	Yes (Portfolio Oversight)	View only
disputed	Yes (Escalations)	Yes (re-trigger AI)

Deliverable 5 — AI Utilisation Matrix

AI Outputs Consumed by Risk Manager

AI Output	Source	Consumed In	How Used
Fraud Risk Score	claims.fraudRiskScore	Approval Queue, Escalations	Risk badge, escalation trigger
KINGA Estimated Cost	claims.estimatedCost	Approval Queue, Comparison View	Cost validation
Physics Deviation Score	ai_assessments.physicsDeviationScore	Exception Intelligence Hub	Anomaly detection
FCDI Score	ai_assessments	Exception Intelligence Hub	Fraud composite index
Vehicle Structural Intelligence	trpc.vehicleStructural.getClaimProfile	Comparison View	ANCAP/CRASH3 safety rating
QMS Compliance	QMSCompliancePanel	Comparison View	Quality compliance flags
Exception Aggregates	trpc.exceptionIntelligence.getExceptionAggregates	Exception Hub	System drift detection
Actionable Recommendations	trpc.exceptionIntelligence.getActionableRecommendations	Exception Hub	AI-generated recommendations
Accident Clusters	trpc.intelligence.getAccidentClusters	Relationship Intelligence	Geographic fraud clustering
Repeat Offender Rate	analytics.getRiskManagerKPIs	Risk Analytics (Enterprise)	Portfolio risk KPI

AI Outputs NOT Consumed by Risk Manager

AI Output	Available In	Missing From
Claims Ageing Analysis	<code>analytics.getClaimsAgeing</code> (Executive Dashboard)	Risk Manager Dashboard
Executive Alerts	<code>analytics.getExecutiveAlerts</code> (Executive Dashboard)	Risk Manager Dashboard
Fraud Investigation Funnel	<code>analytics.getFraudInvestigationFunnel</code> (Executive Dashboard)	Risk Manager Dashboard
Portfolio Leakage Metric	<code>analytics.getMonthComparison</code> (Executive Dashboard)	Risk Manager Dashboard
Causal Reasoning Narrative	Pipeline Stage 5	Not surfaced in Risk Manager Dashboard (only in Comparison View)
Photo Forensics Summary	<code>photoForensicsEngine</code>	Not surfaced in Risk Manager Dashboard

AI Intelligence Gap Assessment

The risk manager has access to deep per-claim AI intelligence through the Comparison View, and to portfolio-level intelligence through the Exception Hub and Relationship Intelligence. However, the Risk Analytics page — which provides the most actionable portfolio intelligence (claims frequency trends, fraud rate by incident type, recovery exposure, repeat offender rate) — is gated to `tier-enterprise`. This creates a significant intelligence gap for risk managers on lower tiers.

Deliverable 6 — Report Catalogue Audit

Per-Claim Reports (Risk Manager Authorised)

Report Key	Report Name	Generator Function	UI Button Exists?	Status
<code>claim.forensic</code>	KINGA Forensic Audit	<code>generateForensicReport</code>	No	Authorised but not surfaced
<code>claim.audit_trail</code>	Audit Trail	<code>generateAuditTrailReport</code>	No	Authorised but not surfaced

Portfolio Reports (Risk Manager Authorised)

Report Key	Report Name	Generator Function	UI Button Exists?	Status
portfolio.claims_summary	Claims Summary	generateClaimsSummaryReport	No direct button	Via Cen
portfolio.dwell_time	Dwell Time Analysis	generateDwellTimeReport	No	Aut but suri
portfolio.panel_beater_performance	Panel Beater Performance	generatePanelBeaterPerformanceReport	No	Aut but suri
portfolio.fraud_summary	Fraud Summary	generateFraudSummaryReport	No direct button	Via Cen
portfolio.assessor_performance	Assessor Performance	generateAssessorPerformanceReport	No	Aut but suri
risk_manager_portfolio	Risk Portfolio	generateFraudSummaryReport (alias)	Yes (Dashboard header, line 247)	Woi but mis

Cross-Portal Reports (Risk Manager Authorised)

Report Key	Report Name	UI Entry Point	Status
recovery.performance	Recovery Performance	Reports Centre	Working (via Reports Centre)
recovery.third_party_profiles	Third-Party Profiles	Reports Centre	Working (via Reports Centre)
executive.claims_trend	Claims Trend	Reports Centre	Working (via Reports Centre)
executive.financial_exposure	Financial Exposure	Reports Centre	Working (via Reports Centre)

Report Catalogue Summary

Of 11 reports authorised for risk_manager , only 1 has a direct UI entry point within the Risk Manager Portal (risk_manager_portfolio in the dashboard header). The remaining 10 are accessible only through the Reports Centre. Additionally, the risk_manager_portfolio report is an alias for the fraud summary report rather than a comprehensive risk portfolio report.

Deliverable 7 — Missing Intelligence Register

Opportunity	Data Exists	Visible?	Effort	Impact
Claims ageing buckets (0–14, 15–29, 30–59, 60+ days)	Yes — <code>analytics.getClaimsAgeing</code>	No (Executive only)	Low	High — SLA and bottleneck visibility
Approval queue dwell time	Partial — <code>workflowAnalytics.getProcessingTimesByStage</code>	Via Workflow Analytics only	Low	High — queue management
Fraud rate trend (month-on-month)	Yes — <code>analytics.getRiskManagerKPIs</code>	Enterprise tier only	Low	High — fraud oversight
Recovery exposure trend	Yes — <code>analytics.getRiskManagerKPIs</code>	Enterprise tier only	Low	High — financial risk visibility
Repeat offender rate	Yes — <code>analytics.getRiskManagerKPIs</code>	Enterprise tier only	Low	High — fraud prevention
Rejection reason tracking	No — no <code>rejectClaim</code> procedure	No	Medium	High — governance audit quality
Information request tracking	No — no <code>requestInfo</code> procedure	No	Medium	High — workflow audit quality
Technical approval rate (KINGA vs. approved)	Partial — per-claim only	No portfolio view	Medium	High — AI accuracy validation
Assessor accuracy vs. KINGA	Partial — per-claim comparison view	No portfolio trend	Medium	High — assessor management
Fraud hotspot map	Partial — accident clusters in Relationship Intelligence	Not in Risk Manager Dashboard	Low	Medium — proactive fraud prevention
Panel beater fraud signal trend	Partial — <code>repair-history.ts</code> fraud signals	Not surfaced	Medium	Medium — repairer risk management

Deliverable 8 — Missing Integration Register

Integration	Should Exist	Currently Exists	Gap
Claims Processor notification on rejection	Risk Manager should notify processor when claim is rejected	No	No <code>rejectClaim</code> procedure exists
Claims Processor notification on info request	Risk Manager should notify processor when requesting additional information	No	No <code>requestInfo</code> procedure exists
Executive Dashboard escalation alert	Executive should be notified when risk manager escalates a claim	No	No notification trigger
Recovery Portal feedback	Risk Manager should see recovery outcomes for claims they approved	No	No feedback loop from recovery to risk manager
Fraud Manager escalation	Risk Manager should be able to escalate directly to Fraud Manager from Escalations tab	No dedicated route	Only available via comment/manual process
Automation Policy integration	Risk Manager should be able to view and propose changes to the automation policy (approval thresholds)	No	Automation policy management is admin-only

Deliverable 9 — Improvement Plan

Critical Priority

Item	Effort	Impact	Owner
Implement <code>rejectClaim</code> procedure — transitions claim to <code>disputed</code> via <code>WorkflowEngine</code> , records rejection reason in audit trail, notifies claims processor	1 day	Enables formal claim rejection with audit trail	Engineering
Implement <code>requestInfo</code> procedure — records structured information request as comment, optionally notifies assigned processor	1 day	Enables formal information requests with audit trail	Engineering

High Priority

Item	Effort	Impact	Owner
Replace <code>risk_manager_portfolio</code> alias with dedicated risk portfolio report covering technical approval rates, fraud prevention, financial exposure, and workflow bottlenecks	2 days	Comprehensive risk portfolio intelligence	Engineering
Add per-claim report buttons (<code>claim.forensic</code> , <code>claim.audit_trail</code>) to Approval Queue tab	0.5 day	Report access within workflow	Engineering
Add Claims Ageing panel to Risk Manager Dashboard	0.5 day	SLA and bottleneck visibility	Engineering
Make core Risk Analytics KPIs available on all tiers (not just Enterprise)	1 day	Portfolio intelligence for all risk managers	Engineering/Product
Add fraud rate trend chart to Risk Manager Dashboard	1 day	Fraud oversight without navigating to Risk Analytics	Engineering

Medium Priority

Item	Effort	Impact	Owner
Add portfolio report buttons (dwell_time, fraud_summary, panel_beater_performance) to dashboard	1 day	Report discoverability	Engineering
Add recovery exposure KPI to dashboard header	0.5 day	Financial risk visibility	Engineering
Add Fraud Investigation Funnel to Risk Manager Dashboard	0.5 day	Portfolio fraud oversight	Engineering
Add notification trigger when risk manager rejects or requests info	1 day	Workflow communication	Engineering

Low Priority

Item	Effort	Impact	Owner
Add claim count badges to sidebar navigation items	0.5 day	UX improvement	Engineering
Add export to Excel for Portfolio Oversight tab	0.5 day	Reporting convenience	Engineering
Add automation policy view (read-only) to Risk Manager sidebar	1 day	Policy transparency	Engineering

Deliverable 10 — Portal Report Specification

Risk Manager Portfolio Report — Ideal Design

Purpose: Provide the risk manager with a comprehensive monthly risk intelligence report covering technical approval decisions, fraud prevention performance, financial exposure, workflow efficiency, and portfolio anomalies.

Section 1 — Executive Summary

- KPIs: Total claims reviewed, approval rate, rejection rate, fraud prevention rate, average approval time
- AI Narrative: LLM-generated summary of the month's key risk trends and anomalies
- Data Sources: `claims` , `ai_assessments` , workflow audit trail

Section 2 — Technical Approval Performance

- KPIs: Approval queue volume, average dwell time, approval rate by claim type, send-back rate
- Chart: Month-on-month approval volume bar chart
- Data Sources: `claims` WHERE `workflowState = 'technical_approval'` , workflow audit trail

Section 3 — Fraud Intelligence

- KPIs: Fraud flag rate by incident type, FCDI score distribution, confirmed fraud count, prevented loss value
- Chart: Fraud rate trend line chart, fraud rate by incident type bar chart
- Data Sources: `claims.fraudRiskScore` , `ai_assessments.fraudRiskLevel`

Section 4 — Financial Exposure

- KPIs: Total reserves, total approved, high-value claims count, average claim value
- Chart: Financial exposure by month, high-value claims distribution
- Data Sources: `claims.approvedAmount` , `claims.estimatedCost` , `analytics.getRiskManagerKPIs`

Section 5 — Recovery Exposure

- KPIs: Total TP quantum claimed, total recovered, recovery rate, repeat offender count

- Chart: Recovery exposure trend, repeat offender rate
- Data Sources: `recovery_cases` , `analytics.getRiskManagerKPIs`

Section 6 — Workflow Bottleneck Analysis

- KPIs: Average dwell time per stage, escalation rate, rejection rate, send-back rate
- Chart: Funnel chart of claims through workflow stages
- Data Sources: `workflowAnalytics.getProcessingTimesByStage` , `workflowAnalytics.getBottlenecks`

Section 7 — Exception Intelligence Summary

- KPIs: Exception count by type, system drift score, actionable recommendations count
- Chart: Exception trend by type
- Data Sources: `trpc.exceptionIntelligence.*`

Deliverable 11 — Implementation Priority Matrix

Item	Priority	Effort (days)	Impact	Effort vs. Impact
Implement <code>rejectClaim</code> procedure	Critical	1	Enables formal rejection with audit trail	High ROI
Implement <code>requestInfo</code> procedure	Critical	1	Enables formal info requests	High ROI
Dedicated risk portfolio report	High	2	Comprehensive risk intelligence	High ROI
Per-claim report buttons in Approval Queue	High	0.5	Report access in workflow	Very High ROI
Claims Ageing panel in dashboard	High	0.5	SLA visibility	Very High ROI
Core Risk Analytics on all tiers	High	1	Portfolio intelligence for all	High ROI
Fraud rate trend chart in dashboard	High	1	Fraud oversight	High ROI
Portfolio report buttons	Medium	1	Report discoverability	Medium ROI
Recovery exposure KPI	Medium	0.5	Financial risk visibility	High ROI
Fraud Investigation Funnel	Medium	0.5	Portfolio fraud oversight	High ROI
Notification triggers	Medium	1	Workflow communication	Medium ROI
Sidebar claim count badges	Low	0.5	UX improvement	Low ROI
Excel export for Portfolio Oversight	Low	0.5	Reporting convenience	Low ROI
Automation policy view	Low	1	Policy transparency	Low ROI

Deliverable 12 — Cross-Portal Integration Map

This Portal	Other Portal	Direction	Data Passed	Status	Gap
Risk Manager	Claims Processor	Receives	Claims in <code>internal_review</code> → <code>technical_approval</code>	Working — shared <code>claims</code> table	No notification when processor submits claim for technical approval
Risk Manager	Claims Manager	Bidirectional	Technical approval decisions, send-back requests	Working — shared workflow	No notification to claims manager when risk manager approves
Risk Manager	Executive Dashboard	Feeds	Portfolio risk metrics consumed by Executive KPIs	Working — shared analytics	Risk Manager cannot see the same KPIs the Executive sees without Enterprise tier
Risk Manager	Recovery Portal	Feeds	Approved claims trigger recovery case creation	Working — automatic trigger	No feedback loop from recovery to risk manager
Risk Manager	Fraud Analytics	Bidirectional	Fraud-flagged claims visible in Fraud Analytics	Working — shared <code>claims.fraudRiskScore</code>	No direct escalation path from Risk Manager to Fraud Manager
Risk Manager	Exception Intelligence Hub	Consumes	AI-generated anomalies and recommendations	Working — <code>trpc.exceptionIntelligence.*</code>	Exception Hub is not surfaced in Risk Manager Dashboard header
Risk Manager	Relationship Intelligence	Consumes	Entity network analysis	Working — <code>trpc.intelligence.*</code>	Not surfaced in Risk Manager Dashboard
Risk Manager	Workflow Analytics	Consumes	Processing times, bottlenecks, SLA compliance	Working — <code>trpc.workflowAnalytics.*</code>	Not surfaced in Risk Manager Dashboard

This Portal	Other Portal	Direction	Data Passed	Status	Gap
Risk Manager	Reports Centre	Bidirectional	Report generation and scheduling	Working — Reports Centre is role-aware	10 of 11 authorised reports only accessible via Reports Centre

Deliverable 13 — Production Readiness Verdict

Verdict: Conditional — Not Ready for Go-Live

The Risk Manager Portal is operationally functional for the approval and financial authorisation workflows. However, the rejection workflow is non-functional — a risk manager cannot formally reject a claim through the system. In a live insurer environment, this means claims that should be rejected will remain in the approval queue indefinitely, creating workflow blockages and incorrect audit records.

Readiness Scorecard

Dimension	Score	Notes
Navigation completeness	8 ₁₀	Comprehensive sidebar with 9 items
Data accuracy	8 ₁₀	Real-time queue data; analytics are sound
Workflow completeness	5 ₁₀	Reject and Request Info are non-functional
AI intelligence utilisation	7 ₁₀	Strong per-claim and exception intelligence; portfolio AI tier-gated
Report coverage	3 ₁₀	1 of 11 authorised reports has direct UI entry point
Cross-portal integration	7 ₁₀	Core integrations work; notification triggers are missing
Audit trail quality	5 ₁₀	Rejection creates no audit record
Overall	6.1 ₁₀	Conditional — fix critical bugs before go-live

Pre-Go-Live Checklist

- ☐ Implement `rejectClaim` procedure (Critical — 1 day)
- ☐ Implement `requestInfo` procedure (Critical — 1 day)
- ☐ Add per-claim report buttons to Approval Queue (High — 0.5 day)
- ☐ Add Claims Ageing panel to dashboard (High — 0.5 day)
- ☐ Replace `risk_manager_portfolio` alias with dedicated report (High — 2 days)

KINGA AutoVerify AI — Risk Manager Portal Audit v1.0
Produced using KINGA Portal Audit Master Prompt v1.1
Audit scope: `RiskManagerDashboard.tsx`, `RiskManagerAnalytics.tsx`, `FraudAnalyticsDashboard.tsx`, `ExceptionIntelligenceHub.tsx`, `RelationshipIntelligence.tsx`, `WorkflowAnalyticsDashboard.tsx`, `routers.ts` (claims namespace, analytics namespace), `reportDefinitions.ts`, `workflow-engine.ts`, `rbac.ts`
